US Citizen, Los Angeles, CA

Education

- B.S. in Computer Science from CSU Northridge, CA Status - Expected 2027
  Minor in Mathematics

Work History

Catalog Data Intern at FCP Euro, CA *May 2026 to Present*

- Used SQL, Python, and catalog data tools to review automotive product information, identify inconsistencies, and improve the accuracy of eCommerce catalog records.
- Data validation, checked SKUs, product attributes, fitment data, and category mappings, helping reduce catalog errors and improve product data quality.
  Workflow support, collaborated with the catalog team to improve data review processes, document recurring issues, and make product information easier to maintain.

Projects

Developer, AI-Enhanced Network Security Project, CSUN, CA

- Built a Python pipeline that cleaned network traffic data, found suspicious patterns, and turned results into simple reports people could understand.
- Feature extraction, processed and normalized traffic records into a structured CSV dataset, enabling repeatable testing for model comparison.
- Used Jira to track tasks, manage project progress, and coordinate development work with others, while using Git and GitHub for version control and branch management.

Developer, Sorting Visualizer, Personal Project, Los Angeles, CA

- Built a web app that shows sorting algorithms step by step using HTML and CSS, so users can see comparisons, swaps, and timing in real time.
- Used React and Typescript for algorithm visualization, implemented Bubble, Merge, and Quick Sort with generator-based instrumentation, making execution replayable and easier to debug.
- Added real-time controls which improved animation consistency and interactivity across platforms.
